

## Four Important Technology Infrastructure

### TCP/IP

Without the introduction of TCP/IP, it will be hard for devices to communicate properly over the internet.

### Internet

It would have been next to impossible to communicate using the myriads of devices had the Internet been completely closed.

### HTML

This software is directly responsible for the ubiquitousness of Internet communications.

### Personal Computer

The versatility and the advent expandability of the PC has enabled users who would normally not have a use for a computer has made it a necessity. The modern smart devices are an extension of this.
